

## ▶ Bird Indexer Model No. CPI-001

▶ The Cantrell Model CPI-001 will quickly and cleanly sever the back skin of the bird that has been halved by the halving machine. The positive position and the infeed of both the front and back half guarantee the shackle will not drag back or cause a missed cut. Proper timing of the product to the machine is assured by the direct driven overhead conveyor. Additionally, the Indexer can be set to distribute birds at different drop stations on the same halving line. Manufactured of stainless steel and polymer, the CPI-001 requires little maintenance except for the occasional greasing of bearings and blade sharpening.
