

# FINAL CONTROL MACHINE

Model No. FCM-500

The FCM-500 Final Control Machine removes any remaining impurities in the carcass after evisceration. This vacuum system method improves both the quality and shelf life of the product. The FCM-500 adjusts quickly and easily for cleaning upper, middle and/or lower parts of the body cavity. It's installed in a 180° curve of the eviscerating line and is driven by the overhead conveyor. Cleaning of the vacuum system consists of simply closing the main vacuum valve and opening the water tap.
