

# AUTOMATIC GIBLET WRAPPER

Model No. CGW-9, CGW-11, CGW-13

The Cantrell Automatic Giblet Wrapper wraps giblets (heart, liver, gizzard and neck) individually at a rate of 100 packages per minute. Located in front of the giblet holding bin, separated giblets are placed in individual trays of the gib-wrap infeed conveyor. The conveyor carries the giblets to the wrapper and unloads onto specially designed paper. The paper is folded, sealed, perforated and cut to standard size packages. From here a small conveyor can carry the packages to a stuffing table where they can be inserted into the bird cavity.
