

HEART & LIVER HARVESTING SYSTEM

Model No. HLHS-100

The Cantrell Heart & Liver Harvesting System offers a significantly higher rate of recovery for hearts and livers while reducing the repetitive operator strain often associated with the average hand harvesting operation. A single operator is needed to unravel the viscera and present it to the machine. The HLHS-100 then separates the heart, lungs and liver from the viscera package, leaving the gall sac with the intestines. The heart and lungs are then guided to the harvesting table where they are separated and blood vessels are removed from the heart.

The Heart and Liver Harvester is available in left or right hand models and is constructed of stainless steel. It is also available with hydraulic power.
