

OVERHEAD NECK SKINNER

Model No: NS-1001 O.H.

The Cantrell Overhead Neck Skinner uses peeler rollers to remove the skin from poultry necks as they exit the Inside/Outside Bird Washer. This 2 HP, chain driven machine features two 1/4" valves to provide independent water pressure to the peeler rollers and skin trough wash. Two proximity switches provide instant shut-off should an attempt be made to remove either of the lexan safety shields. Unique built-in pivoting clamps allow the peeler roller safety guard to be removed in seconds for wash-down without tools or fasteners. The unit is available in both right-hand and left-hand models, is height adjustable to meet varying line requirements and is constructed of quality stainless steel.
