

▶ Parts Skinner Model No. CPS-001BB

▶ The Cantrell Parts Skinner provides a safer, more efficient alternative to hand skinning methods. Although designed specifically for thighs and barrel breast skinning, options are available for other parts processing. The 4 roller system uses a combination of stainless steel and nylon rollers to provide a more efficient operation with less damage to the product. The result is increased production and a better, more consistent grade of yield. The Parts Skinner can be used independently or incorporated into an existing line. Minimal moving parts require less maintenance and the removable covers allow easy access for cleaning and maintenance.

Parts Skinner Model No. CPS-001BB
