

COUNTERFLOW AIR AGITATED SCALDER

Model No: SS-300CF

The Cantrell Counterflow Air Agitated Scalding Machine maintains cleaner water and greatly reduces the amount of bacteria coming in contact with the birds. Upon entering the scalding machine, birds are met by water flowing in a counterflow direction. All scalding lanes are completely divided to ensure the counterflow effect. Birds are submerged in clean water by the time they reach the exit. The modular design allows for easy installation into many settings and configurations. Cantrell understands space is not always plentiful. Regardless of the configuration, all lanes have a v-shaped bottom which simplifies the clean-up process. USDA approved construction.
