

▶ Automatic Waterbath Stunner Model No. AS-2

▶ The Cantrell AS-2 Stunner is a safe, efficient and reliable means of stunning for all types of poultry.

Stunner Operation

The AS-2 is located before the killer at such a distance that the stunned birds reach the killer in about 10 seconds. The heads of the birds pass through a water bath where an electrode is immersed. A second electrode touches the kill line shackle allowing an electrical current to be passed through the birds. The water level of the bath is controlled by a float valve.

Construction

The AS-2 is constructed of heavy duty pre-formed fiberglass mounted on a stainless steel frame. It's equipped with a warning light to indicate when the machine is active. The electronic controls are contained in a separate water resistant cabinet which can be installed in a separate area.

The AS-2 is available in varying lengths for different line speeds.

➤ Automatic Waterbath Stunner Model No. AS-2

Advantages

- Humane
- Complete optimum control of the stunning process and bleed-out
- Two different models to handle all types and sizes of poultry

TECHNICAL SPECIFICATIONS
