

STUNNER CONTROL PANEL

Model No. URF-100-10 DUAL-AC

The Cantrell High Frequency Stunner Control delivers effective stunning with minimal product damage and maximum bleed-out. Operating in the 700 hertz range, the stunner control is available in both AC and DC models. The operating voltage for a 14 bird stunner bath is between 20 and 25 volts, however the controller is adjustable from 10 to 100 volts. The current used depends on stunner bath conditions, such as salt content, water temperature, and the number of birds in the bath. Cantrell stunner controls deliver a soft stun to minimize damage in the killer. The heart rate of the bird is raised just enough to ensure proper bleed-out without damaging the heart. The stunner control has a short circuit protection feature and a complete back-up system to make down-time virtually impossible. The 24" x 24" x 12" enclosure shows frequency, voltage, and current gauges. 115 or 220 VAC input is required. Operator adjustments include voltage and frequency. Switches are readily accessible to change over to the back-up system. The Cantrell High Frequency Stunner will meet all your stunning requirements.
