

COBRA Viscera Harvester

Model No. CVH-14C

The new COBRA Viscera Harvester insures package removal at a better percentage rate than any other machine on the market. Packages are removed in a clean strike without rib or backbone damage.

This forth generation Viscera Harvester offers a completely new spring loaded unit. This unit design provides clean package removal regardless of package position on back of the bird at entry. The overhead drive eliminates the need for air and electricity, therefore reducing maintenance and wear on parts.

The COBRA is available in both 14 and 20 unit models to handle high speed lines with ease. Stainless steel construction and minimal moving parts insure easy clean-up and minimal maintenance. Moreover, your current CVH-14 can be upgraded to the COBRA in just a matter of hours!
