

▶ COBRA Viscera Harvester Model No. CVH-14C and CVH-20C

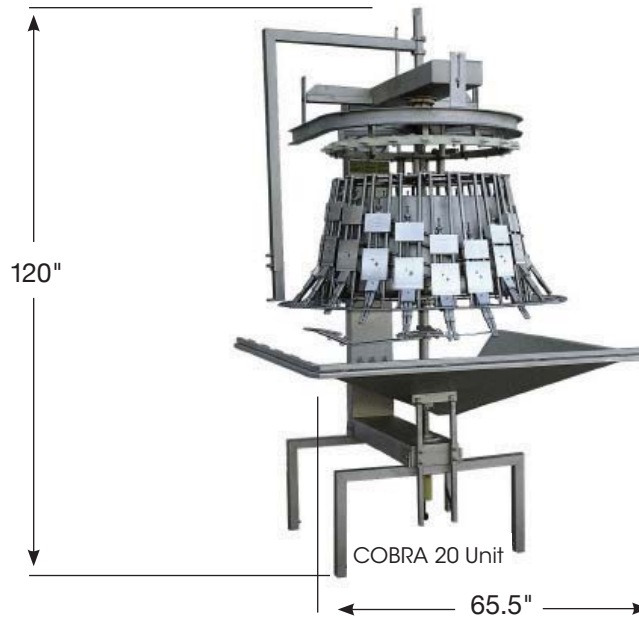

▶ The new COBRA Viscera Harvester insures package removal at a better percentage rate than any other machine on the market. Packages are removed in a clean strike with little rib or backbone damage.

The COBRA Viscera Harvester provides a clean package removal, regardless of package position on the back of the bird at entry. With our spring loaded units and overhead drive, the need for air and electricity is eliminated, therefore reducing maintenance and wear of parts. Stainless steel construction and minimal moving parts also ensure easy clean up.

The COBRA is available in 14 and 20 unit models to handle any 6" center high speed lines, and we offer a 15 unit machine for the 8" big bird lines.
